

CSET, 2nd Ed.

Please note the following correction(s):

Page Number	Correction
Page 491	The solution to question 34 should read: 34. B The expression here cannot be factored into binomials, so can therefore be simplified using the order of operations. $x^2 - x^2$ combine to get 0; $-5x - 4x$ combine to get $-9x$; and $1 - 7 = -6$. What you're left with is $-9x - 6$.
